

# Solutions Overview Guide

## Meeting Room Solution: Courtroom

Q-SYS offers a cloud-manageable audio, video and control platform ideal for delivering optimal courtroom proceedings, whether pristine playback of in-room audio/video evidence or connecting seamlessly to remote testimony. With the efficiency of modular architecture and the productivity of familiar, IP-based connectivity, this unique mix enables governmental organizations to capitalize on their existing network infrastructure and IT management expertise in order to maximize ROI.

- The Q-SYS Core 8 Flex processor is the hub of the system. It connects to the Zoom Rooms Compute with a single driverless USB connection for audio and video.
- With the Q-SYS Control for Zoom Rooms app you can add additional controls to the Zoom native control interface. Zoom supports multiple controllers enabling full room control from multiple locations in the space.
- Q-SYS NC Series cameras use the power of the network allowing you to use as many Q-SYS network conference cameras in the space providing multiple points of view to frame the right shot.
- AcousticDesign™ Series AD-C ceiling loudspeakers are ideal for overhead loudspeaker placement for in-ceiling and open ceiling applications respectively.
- Q-SYS NV-21 video endpoint allows multi-stream video encoding or decoding for network-based HDMI video distribution.
- Network Gooseneck microphones can be placed in as many positions as needed and can be controlled by the Q-SYS system.
